

## **NOTICE TO GOLFERS**

### **GREEN RENOVATIONS AUGUST 22<sup>nd</sup> 2018**

Programming of the greens renovations is as follows:

- Scarify the greens prior to Wednesday 22<sup>nd</sup>. This will remove excess thatch in the greens.
- Course closed 22<sup>nd</sup> - Core with quad mini tines (6mm) all 20 greens
- Clean up cores (20+ ton)
- Apply organic custom blend fertiliser (1 ton)
- Apply sand (40 ton)
- Smooth and rub sand to fill in core holes and level green
- Roll smooth Water, water, water

Core aerating putting greens is a lot like going to the dentist. We know it is necessary a few times each year, but we hope the experience is as quick and painless as possible. Although core aeration temporarily diminishes putting quality, the short-lived pain results in a long term gain for turf health by reducing thatch and organic matter levels, relieving soil compaction, increasing soil oxygen levels and stimulating healthy new growth.

**Wednesday 22/8/18 - The Course will be closed.**

**Driving Range open all day.**

**Coring continues on Thursday 23/8/18 - Expect the Course to be open from midday.**

**Driving Range open all day.**
